

# HPSAC 3000 Pressure Transducer

## General description

Pressure transducer model HPSAC 3000 is a temperature compensated pressure sensing device with zero calibrated output.

High performance and accuracy enables use of this transducer in many applications, and with its compact and handy design is very suitable for end users. The HPSAC 3000 pressure transducers are constructed on 1 mm thick ceramic substrate with one or two pressure tubes. Thick film resistors printed on substrate are individually laser trimmed to provide temperature compensation and zero calibration. An additional resistor is trimmed according to individual transducer span to provide easy transducer amplification with external differential amplifier. Pressure media compatible with this transducer family is dry air or non-corrosive gases and liquids.

The model HPSAC 3000 is designed for constant current excitation. Whole family includes pressure ranges from 10 mbar up to 7 bar.

## HPSAC 3000 Pressure Transducer

### Specification notes

- 1) Over pressure is the maximum pressure which may be applied without causing damage to the sensing element.
- 2) Burst pressure is the maximum pressure which may be applied without causing leakage damage to the sensing element.
- 3) Analog output signal is ratiometric to input current supply  $I_{CC}$ .
- 4) Offset voltage is the voltage output at zero pressure.
- 5) Span is the algebraic difference between the output at full scale pressure range and offset.
- 6) Thermal error of span and offset represents the maximum deviation of transducer signal (span and offset) through whole compensated temperature range from 0 to 70°C in compare to value at 25°C. For pressure ranges  $p \leq 100$  mbar this parameter is defined as 0.5 mV max.
- 7) Repeatability is defined as typical deviation of the output signal after 10 pressure cycles.
- 8) Nonlinearity is defined as the BFSL (best fit straight line) across entire pressure range.
- 9) Media compatibility: on pressure port P1: clean, dry and noncorrosive gases to silicon, Pyrex, RTV, gold, ceramics  $Al_2O_3$ , epoxy, tin.
- 10) Media compatibility: on pressure port P2: noncorrosive gases or liquids to silicon, Pyrex, RTV, ceramics  $Al_2O_3$ , epoxy, tin.
